

③ **MD**

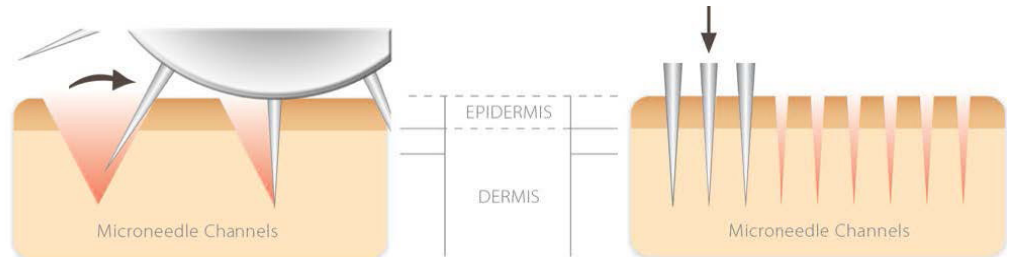

Change the
story your skin
is telling!

The 3MD™ uses multiple needles to vertically pierce the skin with patent-pending AOVN™ (Advanced Oscillating Vertical Needle) technology. When moved across the skin, the 3MD allows for millions of fine channels to be created in the skin. These channels can carry up to 80% more topical nutrients, allowing for transdermal delivery of these nutrients deeper into the skin to feed cells found in the dermis and basal layer of the epidermis.

The 3MD™ systematically creates micro-punctures in the skin and the body responds in a natural way by launching processes to repair the physical damage. The result is an increased production of normal woven collagen, similar to fractional laser treatments, but without the side effects and downtime. 3MD Treatments have also been found to be more effective and beneficial than most microdermabrasion and chemical peels.

When compared to traditional dermal rollers, the 3MD™ causes less epidermal (skin) damage, which reduces pain and discomfort, and makes the 3MD a safer, more comfortable, and more effective micro-needling treatment (see image below). The 3MD's disposable cartridges eliminate risk of cross-contamination, whilst the adjustable needle depth allows for a treatment that is fully tailored to your individual needs. The 3MD is so advanced, it is even suitable and safe to use in delicate and hard to reach areas such as those around the eyes and lips and on the nose. Your clinician will assess your skin and treatment area to recommend a treatment plan suitable for you.
